

VBOT

DEX Telegram Bot

PITCH / DECK

/12/2023

■ Vbot Trading Suite

VBot is a cutting-edge trading bot and integrated trading terminal that transcends conventional investment strategies.

Our comprehensive suite of features is meticulously crafted to elevate your portfolio, providing an unparalleled trading experience.

■ Inconveniences in DEX

1

Time consuming

- DEX trading is slower primarily due to the confirmation step on blockchains.

2

Ineffective pricing

- Users might encounter suboptimal rates as the process involves navigating various pools, resulting in less favorable exchange rates.

3

Restricted Features

- The platform typically lacks comprehensive support for swaps, limit orders, copy trading, etc.
- The cost associated with limit orders and copy trading bonuses is high.

■ Solution

Easy Trading

Its user-friendly interface, featuring interactive menus or commands, enables quicker trading experiences compared to decentralized exchanges.

Smart Router

A smart router contract optimizes trades by selecting the most cost-effective prices across various exchanges, ensuring efficient and favorable trading outcomes.

Diverse Trading Features

Supports essential features like swapping tokens, placing limit orders, enabling copy trading, and efficiently managing multiple wallets.

■ Product Overview

High Speed

- **VBot** is engineered for speed, ensuring rapid execution of trades.
- Take advantage of market opportunities with near-instantaneous order processing, giving you a competitive edge in dynamic markets.

DEXs Integrated

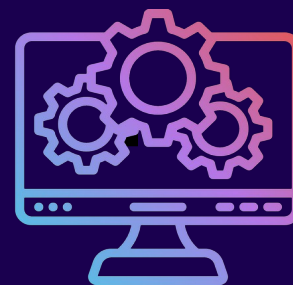

- **VBot** supports multiple decentralized exchanges, offering users the flexibility to trade across various platforms from a unified interface.
- Access decentralized markets with ease and efficiency.

Trade Monitoring

- Benefit from constant market surveillance as **VBot** monitors price movements, news, and events to make informed trading decisions at any time.

ECOSYSTEM

VBOT

Telegram Bot

- From answering queries to providing real-time updates, our bots make communication seamless and user-friendly.
- Telegram bot in our ecosystem can manage and trade smoothly and fee-effectively

\$VBOT Token

- Users can utilize VBT for discounted trading fees, premium features, and access to advanced analytics tools.
- By staking VBT, users can earn attractive rewards, including additional tokens, priority access to new platform functionalities.

VBOT

Web Platform

- Access your Telegram bot's functionalities seamlessly through a user-friendly web interface.
- Enjoy the flexibility of managing your interactions from both mobile and desktop devices with ease.

TOKEN UTILITY

FEE REDUCTION

REVENUE SHARING

Holders of VBot tokens participate in our profit-sharing program

VBOT ECOSYSTEM

100% of the token supply was added to liquidity at launch.

BUY / SELL TOKENS

- Execute buy/sell orders effortlessly using straightforward commands within the Telegram chatbot.
- Whenever trading through **Vbot**, trading wallets interact with the **Vbot** router contract.
- If you buy a token, the router contract will deduct the fee from your input amount. The fee is deducted from your output amount if you sell a token.

BUY / SELL LIMIT

- Vbot allows users to precisely customize their trading strategies using the buy/sell limit feature.
- Once the market reaches predefined price levels, VBot executes buy or sell orders automatically, eliminating the need for constant manual monitoring.
- Receive notifications when your buy/sell limits are triggered, allowing users to manage your portfolio proactively.

COPY TRADING

- Automatically replicate the trades of skilled and successful traders in real time.
- Diversify your portfolio by selecting traders aligned with investment goals.
- Experience automatic adjustments to position sizes based on allocated funds.

VBot ensures proportional copying, maintaining balance and alignment with your chosen traders.

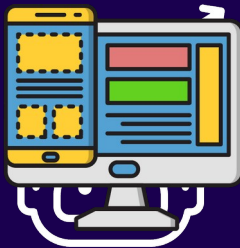

MANAGE WALLET

- The Wallet Management feature provides a real-time overview of holdings, including current prices and portfolio performance.
- Vbot allows users to easily manage multiple wallets, following a user-friendly process to move funds between your wallet and external accounts securely.

AI Integration

Multifunctional Interface

ROADMAP

Phase 1

Telegram Bot Done

- Introduce Vbot Telegram Bot with core features including managing wallet and effectively trade.

Phase 2

Vbot Token

- Develop and test a prototype of the VBot Token ecosystem.
- Launch community programs and outreach.

Phase 3

Copy Trading

- Launch the copy trading platform to the public.
- Explore partnerships with other fintech platforms for a more comprehensive financial ecosystem.

Phase 4

Web Platform

- Design a multifunctional interface for efficiency and ease of use.
